

CHANGES TO REFERENCE RANGES

Oestradiol Reference Range Change

Having reviewed the performance of our Oestradiol assay, we have decided that from 10th May 2010, we will no longer report Oestradiol results below the value of 100pmol/L. Reference ranges have been amended to reflect this change.

e.g. Follicular phase	100 to 921
Luteal Phase	100 to 1207
Post Menopause	<100
On Oral Contraception	<100

Glucose Reference Range Change

As part of the move to standardise reference ranges across New Zealand, as from 10th May 2010, we will be adopting the NZDGG recommended reference range for fasting glucose of 3.5 to 5.4 mmol / L.
