

HELICOBACTER PYLORI BREATH TEST PATIENT INSTRUCTIONS

What is the purpose of this test?

The ¹³C-urea Breath Test checks to see if an organism called *Helicobacter pylori* is present in your stomach. *Helicobacter pylori* is an important factor in stomach and duodenal ulcers. The results of this test will help your doctor decide if you require further treatment or investigations.

What does the test involve?

The ¹³C-urea Breath Test is accurate and non-invasive. There are four steps to this test.

1. You will be asked gently to blow through a straw into two test tubes.
2. You will be given a small drink of citric acid in which a tablet of ¹³C-urea is dissolved.
3. Wait for 30 minutes.
4. You will be asked to blow into another two test tubes.

These four test tubes containing your breath samples will be sent to a laboratory for analysis. Your doctor will receive the results within five working days.

How to prepare for the test?

Prior to the test

- **No** antibiotics for at least 4 weeks.
- **No** proton pump inhibitors for at least 14 days.

Somac – Pantoprazole

Losec – Omeprazole

Zonton – Lansoprazole
